Lightpaper

Summary

A major challenge new ideas and projects face on their way to implementation is to raise funds. The blockchain world responds to this problem through mass financing in the form of seed investments, private sales, public sales, crowdloans, etc.

In such *crowdfundings*, both the investors and the projects that want to raise funds need reliable, fair, and transparent platforms. While some projects develop their own contracts for the ICOs they will carry out, others do this through purpose-specific platforms collectively referred to as launchpads.

Due to the various problems and uncertainties that the decentralized, anonymous nature of the blockchain world presents, there is an ongoing need for new platforms that are easily accessible, reliable, transparent, and decentralized.

A few methods are being experimented with crowdfunding such as flat-rate sales, auctions, reverse auctions, and bonding curves.

While the many existing platforms practice their selected funding mechanism, there is no single funding infrastructure that offers multiple of those methods under the same roof.

Lightpaper

Additionally, different participation mechanisms end up enabling large investors to access larger funds, causing frustration in small investors and a lack of enthusiasm in new investors to come aboard.

This is best observed in launchpads with tier-based allocation schemes and gives way to a proliferation of copy-paste launchpads so that a new group of investors can enjoy benefits of joining early. Each platform having different requirements for participation also creates confusion in participants, who find them burdensome to keep up with.

Another shortcoming of existing crowdfunding platforms is their confinement to the specific network on which they were developed. Investors would appreciate using a one-stop-shopping platform that could host projects developed on different networks.

As Seed Hub, we aim to offer a product package that will eliminate all these problems.

Products

1. Seed Hub Decentralized

In our decentralized funding tool, project owners will be able to choose their preferred sales method:

- Fixed Price Sales
- Auction
- Reverse Auction
- Bonding Curve

While performing the sales of the project tokens in a decentralized manner, it will also be possible for the project owners to configure the following variables:

- Hard Cap
- Sales Period
- Token Lock Period
- Sales Audience (sale to SEED Holders, public sale, private sale.)

2. Seed Hub OTC

We aim to create a safe trading environment with user friendly interfaces for those who want to securely exchange either their rights to tokens before those tokens are minted, or the tokens themselves after they are minted as in a conventional OTC.

Products

3. Seed Hub Probe

This service aims to identify foreseeable risks of candidate projects. Seed Hub carries out preliminary research and verifies teams as per disclosed identity data (a know-your-project team verification), thus creating an additional layer of trust before launch. This preliminary project evaluation report will be submitted to the DAO vote to decide whether to carry on with the sale or not.

4. Seed DAO

A DAO will be established to clarify the technical roadmap of the Seed Hub project and the sales to be made. If a project does not receive sufficient interest and support from the community, it will not proceed to make verified sales on the platform even if it has passed the preliminary review by the Seed Hub team. Voting in the DAO will be done using xSEED tokens.

Products

5. Seed Hub Token

This will be the utility token of the platform, with the following purposes:

- In Seed Hub Probe sales, the candidate projects will pay their application fee with xSEED tokens.
- In the DAO votings, voting power will be proportional to the number of xSEED tokens held.
- There will be special sales opportunities for xSEED token holders. In sales made exclusively to xSEED token holders, the transaction fee from the sales pools will be reduced.
- A portion of the revenue from sales commissions will be used to buy back xSEED tokens. The DAO will decide what to do (burn, spend for new development activity, promotions, etc.) with those buybacked tokens.

6. Seed Bridge

Seed Hub is aimed to be a multichain platform so that it supports funding from different networks. Building a token bridge will be a priority to enable the use of xSEED token for sales across EVM-based Avax, BSC, and -of course- Ethereum networks. Other networks may be added as per DAO decisions.

Tokenmetrics

Token Name: xSEED

Total Supply: 100,000,000 Tokens

Breakdowns

Team

A vested safe to be used to meet the regular expenses of the project.

Ecosystem

To be used for the future needs of the project as per DAO decisions, such as for liquidity requirements in different networks, additional development activity, community building, airdrops.

Advisor/Partner

A safe reserved for partners supporting the project.
Funds given to advisors will be vested.

LP Rewards

Planned to be transferred to the initial liquidity pool.

Liquidity Pool Rewards

A safe reserved to reward the participants who support pool liquidity. It will not be used for the Avax network. It will be rewarded to liquidity providers during the creation of liquidity pools in other networks after the bridge is in place.

Tokenmetrics

Token Distribution

Distribution	Share	Amount
Team	15%	15,000,000
Ecosystem	23%	23,000,000
Advisors/Partner	10%	10,000,000
LP Rewards	20%	20,000,000
Sale	32%	32,000,000
Total	100%	100,000,000

Vesting Schedule

Distribution	Share	Amount	Vesting Plan
Team	15%	15,000,000	Vesting for 6 months followed by linear (5.55% per mo) unlocks between the 7th and 24th months
Ecosystem	23%	23,000,000	Will be used for requirements of ecosystem based on DAO decisions, unlocked but will not sold by the team
Advisors/Partner	10%	10,000,000	Vesting for 6 months followed by linear (5.55% per mo) unlocks between the 7th and the 24th months
LP Rewards	20%	20,000,000	Will be used for LP requirements at different networks
Pre Seed	3.2%	3,200,000	5% unlock at 3th month, vesting for 9 months followed by a 7.92% unlock on the 13th month, then linear and equal unlocks until 24th month.
Seed Sale	6.4%	6,400,000	5% unlock at 3th month, vesting for 5 months followed by linear (7.3 % per mo) unlocks between the 9th and the 21th months
Strategic Sale	9.6%	9,600,000	5% unlock at 3th month, Vesting for 4 months followed by unlocks on the 7th, 10th, 13th and 16th month (10% each), then 8 linear (6.88% per mo) unlocks between the 17th and the 24th months
Private Sale	9.6%	9,600,000	5% unlock at TGE, vesting for 3 months followed by 11 linear (8.63% per mo) unlocks between the 4th and the 14th months
Public Sale	3.2%	3,200,000	Unlocked

Sale Details

Distribution	Amount	Total Supply	Price
Pre-Seed	3,200,000	3.20%	\$0.0075
Seed	6,400,000	6.40%	\$0.0100
Strategic	9,600,000	9.60%	\$0.0150
Private	9,600,000	9.60%	\$0.0300
Public Sale	1,600,000	3.20%	\$0.0600

6.88% of raised funds will be used for DEX liquidity pool at launch.
