Seed Hub

Multichain Toolbox
for Blockchain Crowdfundings

Content

Lightpaper

Summary

A major challenge new ideas and projects face on their way to implementation is to create funds. The blockchain world responds to this problem through mass financing formulated as seed investments, private sales, public sales, crowdloans, etc.

In such "crowdfunding", both the projects that want to raise funds and the investors need reliable, fair, and transparent platforms. While some projects develop their own contracts for the ICOs they will carry out, some projects do this through purpose-specific platforms collectively referred to as launchpads.

As decentralization and -occasionally- the anonymity of the blockchain world present us various problems and uncertainties, the need for new easily accessible, reliable, transparent, and decentralized funding platforms continues.

A few methods are being experimented for crowdfunding such as flat-rate sales, auctions, reverse auctions, and bonding curves. While the many existing platforms practice their selected funding mechanism, there is no single funding infrastructure that offers several of those methods under the same roof.

Lightpaper

Additionally, different participation mechanisms end up enabling large investors to access larger funds, causing frustration in small investors and a lack of enthusiasm in new investors to come aboard. This is best observed in launchpads with tier-based allocation schemes and result in a proliferation of copy-paste launchpads so that new investors can enjoy being early to join. Also, the fact that each platform requires different participation conditions creates confusion in participants and makes it burdensome to keep up with. Another shortcoming of existing crowdfunding platforms is their confinement to the specific network in which they were developed. Investors would clearly appreciate using a one-stop-shopping crowdfunding platform that could host projects developed on different networks.

As Seed Hub, we aim to offer you a product package that will eliminate all these problems.

Products

1. Seed Hub Decentralized

In our decentralized funding tool, each project owner will be able to choose their preferred sales method:

- Fixed Price Sales
- Auction
- Reverse Auction
- Bonding Curve

While performing the sales of the project tokens in a decentralized manner, it will also be possible for the project owners to determine the following variables:

- Hard Cap
- Sales Period
- Token Lock Period
- Sales Audience (sale to SEED Holders, public sale, private sale.)

2. Seed Hub OTC

We aim to create escrow contracts with a simple interface and create a safe trading environment for those who want to securely exchange their rights to tokens before tokens are minted, or after, the tokens themselves as in a conventional OTC.

Products

3. Seed Hub Probe

This service aims to identify foreseeable risks of candidate projects. Seed Hub carries out preliminary research, verifies teams as per disclosed identity data (as a sort of KYC, a know-your-project team verification), thus creating an additional layer of trust before launch. This preliminary project evaluation report will be submitted to the DAO vote for a decision on whether to make the sale or not.

4. Seed DAO

A DAO will be established to clarify the technical roadmap of the Seed Hub project and the sales to be made. A project that has passed the preliminary review by the Seed Hub team will not have a chance to make verified sales on the platform if it does not receive sufficient interest and support from the community. Voting in the DAO will be done using xSEED tokens.

Products

5. Seed Hub Token

It will be the utility token of the platform and used for the following purposes:

- In Seed Hub Probe sales, the candidate projects will pay their application fee with xSEED token.

- In the DAO votings, voting power will be proportional to the number of xSEED tokens held.

- There will be special sales opportunities for xSEED token holders. In sales made exclusively to seed token holders, the transaction fee from the sales pools will be reduced.

- A portion of the revenue from sales commissions will be used to buy back xSEED Tokens. DAO will decide what to do (burn, spend for new development activity, promotions, etc.) with these buybacked tokens.

6. Seed Bridge

Seed Hub is aimed as a multichain platform so that it supports funding in different networks. Building a token bridge will be a priority to enable the use of xSEED token for sales across EVM-based Avax, BSC, and of course, Ethereum networks. Other networks may be added as per DAO decisions.

Tokenmetrics

Token Name: xSeed

Total Supply: 100,000,000 Tokens

Breakdowns

Team

A vested safe to be used to meet the regular expenses of the project.

Ecosystem

To be used for the future needs of the project as per DAO decisions, such as for liquidity requirements in different networks, additional development activity, community building, airdrops.

Advisor/Partner

A safe reserved for partners supporting the project.
Funds given to advisors will be vested.

Advisor/Partner

Planned to be transferred to the initial liquidity pool.
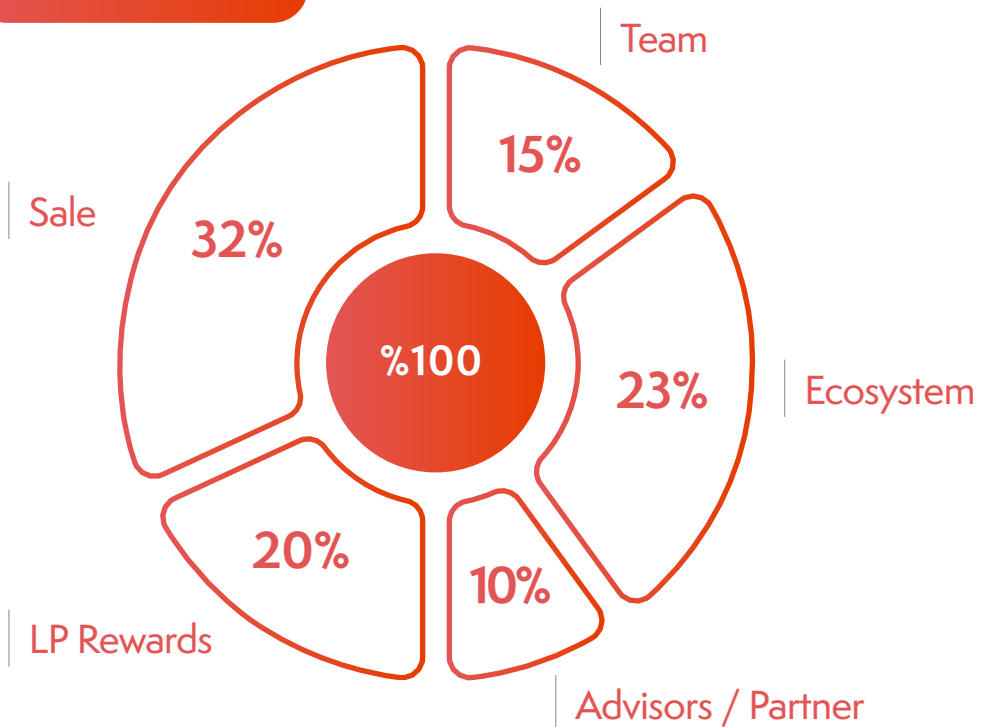

Liquidity Pool Rewards

A safe reserved to reward the participants who support pool liquidity. It will not be used for the Avax network. It will be rewarded to liquidity providers during the creation of liquidity pools in other networks after the bridge is in place.

Tokenmetrics

Token Distribution		
Distribution	**Ratio**	**Amount**
Team	15%	15.000.000
Ecosystem	23%	23.000.000
Advisors/Partner	10%	10.000.000
LP Rewards	20%	20.000.000
Sale	32%	32.000.000
Total	100%	100.000.000

Vesting Schedule

Distribution	Ratio	Amount	Vesting Plan
Team	15%	15.000.000	6 month vesting then %5.55 unlock for 18 months
Ecosystem	23%	23.000.000	Will be used for requirements of ecosystem based on DAO decisions, unlocked but will not sold by the team
Advisors/Partner	10%	10.000.000	6 months vesting then %5.55 unlock for 18 months
LP Rewards	20%	20.000.000	Will be used for LP requirements at different networks
Pre Seed	3%	3.200.000	12 months vesting then 10% unlock then 15% unlock 6 months (Total 19 months)
Seed Sale	6%	6.400.000	9 months vesting then equal unlock starts from 10th months during 24 months of launch (Total 24 months)
Strategic Sale	10%	9.600.000	3 months vesting, 10% unlock at months 4,7,10,13 and 16 then equal unlock untill 24th month of TGE (Total 24 months)
Private Sale	11%	11.200.000	10 equal unlocks from 4th month of TGE. (Total 13 months)
Public Sale	2%	1.600.000	Unlocked

Sale Details

Distribution	Amount	Total Supply	
Pre-Seed	3.200.000	3,20%	0.0075$
Seed	6.400.000	6,40%	0.0100$
Strategic	9.600.000	9,60%	0.0150$
Private	11.200.000	11,20%	0.0300$
Public Sale	1.600.000	1,60%	0.0600$

Dax Listing Price	Circulating Supply at TGE	Market Cap at TGE	Fully Dilluted Value at TGE
0,09 $	2.711.111	244.000 $	9.000.000 $

Roadmap

Q3 **2021**
Project Design
Community Building

Q4 **2021**
Investment Tours
Sale details will be announced soon.
Seed Hub Decentralized `12 - 2021`
Fixed Swap Auctions
Seed Hub Token Launch

Token Sales

Q1 **2022**
Seed Hub Decentralized
`01 - 2021` Auctions
Reverse Auction
Bonding Curve
Seed Hub OTC
`02 - 2021` Seed Hub Probe
`03 - 2021` Seed Hub DAO

Q2 **2022**
Seed Bridge
ETH Implementation
BSC Implementation

Q3 **2022**
Polkadot
EVM Implementation

Q4 **2022**
L2
Implementations
